

DEPARTMENT OF COMMUNICATION SCIENCES AND DISORDERS

The undergraduate major of communication sciences and disorders provides students with foundational knowledge required for graduate study in speech-language pathology and audiology, or careers in allied health, human services, or education. Speech-language pathologists are specialists in typical and atypical human communication and swallowing. Audiologists are specialists in typical and atypical hearing and balance. Speech-language pathologists and audiologists provide service to individuals across the lifespan in educational, medical, and related settings. Professionals in this field serve as advocates for diversity, language access, and quality of life. A graduate degree is required for practice as a state-licensed and American Speech–Language–Hearing Association (ASHA) certified speech language pathologist or audiologist.
